**Comments:** (If possible, please reference section and/or page number in document if applicable.)

These hearings are premature. We do not have a final environmental impact statement, a ruling by the NRC, a finalized Siting Guideline or a detailed plan for transporting the waste.

Yucca Mountain is inadequate. A plethora of scientific evidence indicates that Yucca Mtn could be subject to earthquakes, volcanic activity and thermal water flows.

Geologic "dumping" obviates future science which could turn nuclear waste into either a benign substance or or reusable fuel.

So long as nuclear waste is produced, creating a nuclear "dump" will only add one more fixed nuclear storage site and multiple mobile sites. We are not cleaning the current storage sites, only shuffling the waste from politically powerful states to politically weak states.

Please note: For your comment(s) to be considered by the Secretary of Energy before a decision is made whether to recommend the site to the President, your comment(s) need to be received by the U.S. Department of Energy by September 20, 2001. To the extent practicable, the Department will consider comments received after September 20, 2001.

Please feel free to attach additional pages; more postage may be needed. If you prefer to mail your comments, you may use the back side of this sheet as a postage-paid, self-mailer. To do so, fold in thirds along the dotted line so address and postage-paid notice are visible, then secure with tape.
